

Google Ads API Tool - Design Document

1. Overview

Internal tool for managing Google Ads Search campaigns for Tx United Pros, a Texas home service lead generation platform. This tool is used exclusively by our internal team to create and manage search ads promoting HVAC, plumbing, and remodeling services.

2. Tool Architecture

- **Language:** Python 3.11
- **Google Ads API:** google-ads library v25+
- **Hosting:** Internal server
- **Authentication:** OAuth 2.0 with service account

3. Core Functionality

Campaign Management

- Create Search campaigns with location targeting (Texas cities)
- Set budgets and bidding strategies
- Pause/resume campaigns
- Monitor campaign status

Reporting

- Daily performance reports (impressions, clicks, conversions)
- Cost tracking by campaign
- Keyword performance analysis

4. Access Control

- Internal team members only (Eddie King III - owner/operator)
- No external user access
- No third-party tool integration

5. Data Flow

1. User authenticates via OAuth 2.0
2. API client calls Google Ads API via google-ads Python library
3. Campaign data stored locally for reporting
4. No customer PII stored - leads go directly to Formspree form

6. Use Case

Tx United Pros creates Search ads targeting homeowners in Waco, Austin, Dallas, Houston, and San Antonio looking for HVAC, plumbing, and remodeling services. When users click ads, they land on a lead capture form. Qualified leads are then sold to local service businesses.
